

## How to receive a payment

1. Tap **Receive** on the wallet home screen.

2. Your payment code is displayed on your mobile device. The person from whom you are receiving money can simply scan this with the camera on their mobile device, or they can manually enter your payment code.
3. Otherwise, tap **Share Payment Code** to send a clickable link of the code (via text message or another app).
4. Optionally, you can tap **Specify Amount** to set the amount of money you'll receive. When you're done adding an amount, tap **Confirm Amount**. The specified amount is added and will be deducted from the other person's account when they pay.

**Note:** The payee has the option of editing the payment amount before authorizing and sending it to you.
